Managing life-threatening fungal infections: relating practical applications to patient outcomes

The increasing numbers of severely immunosuppressed patients has led to a rising burden of invasive fungal infection. While treatment options are available for these pathogens, dose limiting toxicity and the appearance of drug resistant organisms are becoming a growing problem and challenge to clinicians managing and implementing successful treatment plans.¹

Building on from the success of last year's fungal education roadshow, Pfizer is delighted to invite you to the **'Managing life-threatening fungal infections'** meeting series. These meetings will draw together a multi-disciplinary team of leading experts from around the UK, who will review current thinking on improving the diagnosis, management and treatment of invasive fungal infections, for improved patient and health economic outcomes. The agenda combines both highly scientific plenary and real-life interactive sessions to maximise learning opportunities.

If you are unable to attend the meeting on the date stated on the front of this invitation, you would be welcome to attend another in the series on an alternative date. Please see contact details below to enquire for further information.

Attending the meeting

If you would like to attend this meeting, please contact Sarah Tomlinson:
E: saraht@athenamedicalpr.com T: 020 8956 2871

Please note that spaces are limited therefore early application is recommended.
